

## Million Words Club

Book Title	Date Finished	Number of Words

To figure how many words in a book:

1. Find a page that has a lot of words
2. Count the words on one line and write number down
3. Count how many lines are on that page and write that number down
4. Count how many pages in the book and write that number down
5. Multiply all three numbers and that will give you an approximate number of words in the book.

You don't have to list books that you have taken quizzes on or count the words, because Reading Counts keeps track of that for you!
